Specialized software solutions for Construction

The activity of a construction company represents 80% work on the construction site with resource allocation: people, equipment, machinery. The efficient management of resources, the implementation of more projects with fewer resources, strict cost analysis and reduction are prerequisites for maximizing profitability and growth.

Supply automation and stock control

Resource, time, cash flow and budget planning

Consumption planning and tracking

Control of costs per project, phases and sub-phases

SocrateERP provides an integrated application to construction companies and helps efficiently manage all of the company's processes: procurement, contract management, costs, consumption, employees, equipment and machinery, maximizing profits by efficiently executing each project, and managing multiple projects with fewer resources by integrating and automating key processes.

SocrateERP for full management and automation

Integrate and automate all processes in the company with a modern and flexible ERP software solution

SocrateBI for industry-based analysis and reports

Answer any question, analyze your data and make better business decisions with SocrateBI

Timekeeping site personnel with Timekeeping App

The first mobile app that enables timekeeping in the construction industry

Functionalities

Construction Site Management

Efficiently manage the construction works, keep track of the quantitative value of all activities, projects, phases and sub-phases.

Project cost control

Define and track planned, budgeted and committed costs, real-time comparison with the actual costs of running the work.

Equipment and machinery management

Plan and track the equipment and machinery on the construction sites, the consumption being recorded on the machine timesheet.

Time management

Manage the timekeeping of both the productive and non-productive staff. Add the working hours by projects, phases and subphases with an intuitive application that is works online and offline.

Timely supply

Control the quality of your inventory and plan your purchases. Verify compliance with contract terms.

Sales management

Manage the entire sales process, customers, and business conditions, from offer, contracts, customer orders, delivery, billing to receipts.
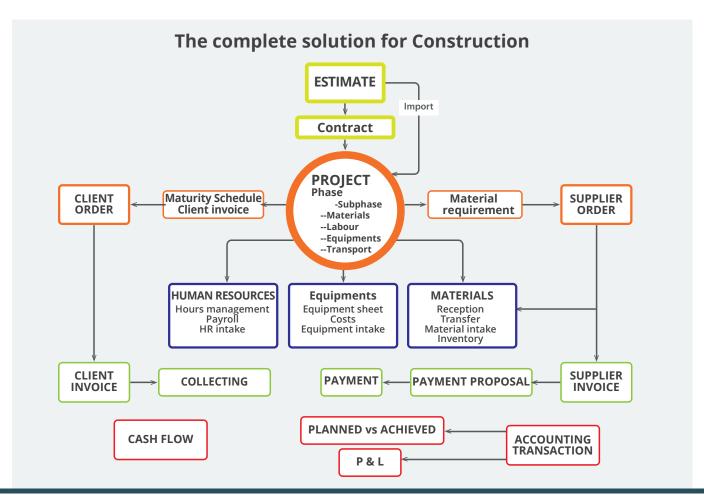

Financial and Accounting Management

Automate and manage your entire financial and accounting activity from all locations and profit centers, and consolidate the information at group-level.

Integration with quoting and project management software

You can customly integrate quoting and project management software to provide complete project tracking.

Industry specific reports and analysis

Real-time reporting on profitability, consumption of materials, people, equipment and transport.

The complete solution for Construction
