

SocrateERP

Accelerate your business performance

SocrateERP is a modern solution in cloud, developed by BITSoftware, that includes enterprise resource management and reporting capabilities for businesses that activate in various industries.

An open platform built on an architecture that allows for easy application expansion for specific needs and integration with other software or devices to meet the specific needs of organizations.

Efficient
and flexible

Industry
focused

Short
implementation time

Automatic
software upgrades

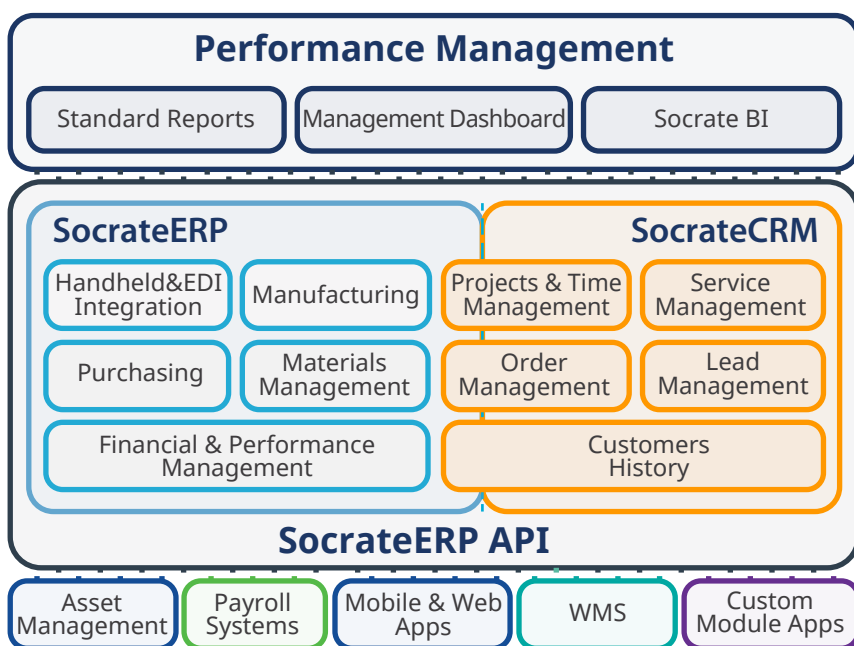

Data and
application security

Efficient Business

SocrateERP - complete business solution ERP&CRM&BI for modern companies that want to efficiently manage all processes in the organization. The built-in business engines allows automatization of processes in order to become more efficient in handling the company's activity.

Low Cost

SocrateCloud is scalable, flexible, and adaptable and frees you from the upfront capital costs (infrastructure), offering a predictable pay as you go subscription model that makes cash flow management and planning much easier. The cloud infrastructure provides best data privacy, security and availability.

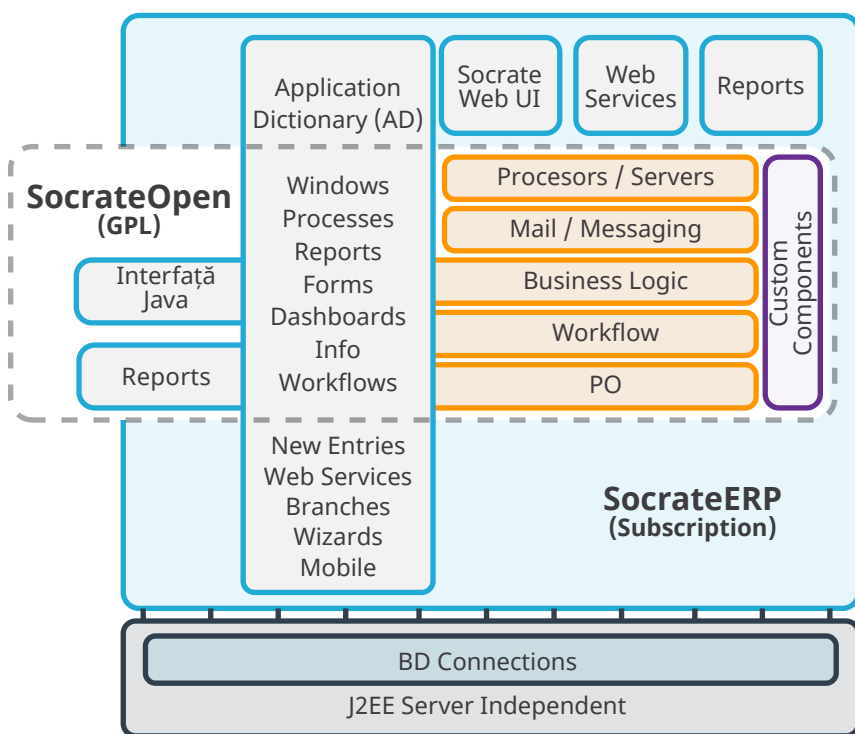

Leanwise implementation methodology

BITSoftware introduces a lean implementation methodology, knowing that the performance of an organization is determined by its construction. That construction model is made of a process model, an interaction model between the actors in the company and an object model of the 'company world'. Those models provide more transparency about the mapping of the ERP product on the organization, giving everybody much more information about the applicability of the software for the company and the possible gaps in the software that have to be solved. Although models are specific for particular companies, within SocrateERP approach, several models for specific branches/verticals are already developed and available, making the implementation faster and easier.

SocrateERP Architecture

SocrateERP is based on a modularized architecture which provides scalability at highest rates, supporting multiple servers, very large transaction volumes, many users, adaptability, in order to maintain the shortest possible lead time in development and deployment. More than that, on the cloud, there is no downtime, because we can upgrade each module independently on a continuous release management philosophy.

Platform/technology

Independent of the operating system
Databases: Postgres 13.x (provided by Amazon Aurora PostgreSQL)
Technology: J2EE & SOA
Application Server: Tomcat 9.x.
Infrastructure: Amazon Web Services (AWS)
RESTful Web Services
User interface: Ajax-GWT

Rapid development application platform

Quickly build new apps
Easy integration
Workflow and business engines
Modularized architecture
High scalability and availability
Rich Internet Architecture
Web Services & API
