Specialized software solutions for Logistics

Logistics departments are constantly under pressure to improve the efficiency of the company's processes and the speed and accuracy of deliveries. Software solutions help reduce costs and optimize a wide range of processes: from order management, inventory control, to accelerating the supply chain.

Efficiently manage warehouses in different locations

Automate logistics processes

Reduce storage and handling costs

Decrease order processing time

Our solutions allow software integrations with any EDI, TMS, YMS application, as well as hardware integrations with handheld devices or industrial printers.

FluxVision WMS

WMS solution in the cloud, which automates and optimizes logistics flows, providing complete traceability

WiData Inventory

Application that streamlines the process of inventory and management of fixed assets

SocrateERP

ERP solution in the cloud for efficiency in procurement, orders, accounting and document generation

SocrateBI

Business Intelligence solution in cloud that provides specific indicators and analysis

Functionalities

Timely supply

Automate procurement, from supply requirements, vendor orders, vendor invoices to payment.

Stock and warehouse optimization

Manage the entries and exits of goods in the warehouse as well as the inventory. Reduce costs by controlling inventory.

Order management

Create offers, customer orders, reserve goods, manage inventory, generate invoices and track receipts, automatically notify customers.

Delivery optimization

With SocrateERP, you optimize deliveries to customers, automating the delivery process. Optimal delivery route and automation of cargo loading in trucks in reverse order of delivery route, so that the last cargo loaded will be the first delivered.

Picking process optimization

Establish multiple picking strategies taking into account the structure of the warehouse, the importance of items, the type and size of goods or certain criteria imposed by the customer.

Reception optimization

FluxVision WMS allows much faster reception by barcode scanning.

Storage location management

Real-time 3D viewing allows you to better manage and use your storage space.

Financial and accounting management

Manage and automate all financial and accounting activity. The system is multi-company, multi-accounting, multi-currency, multi-tax and multi-language.
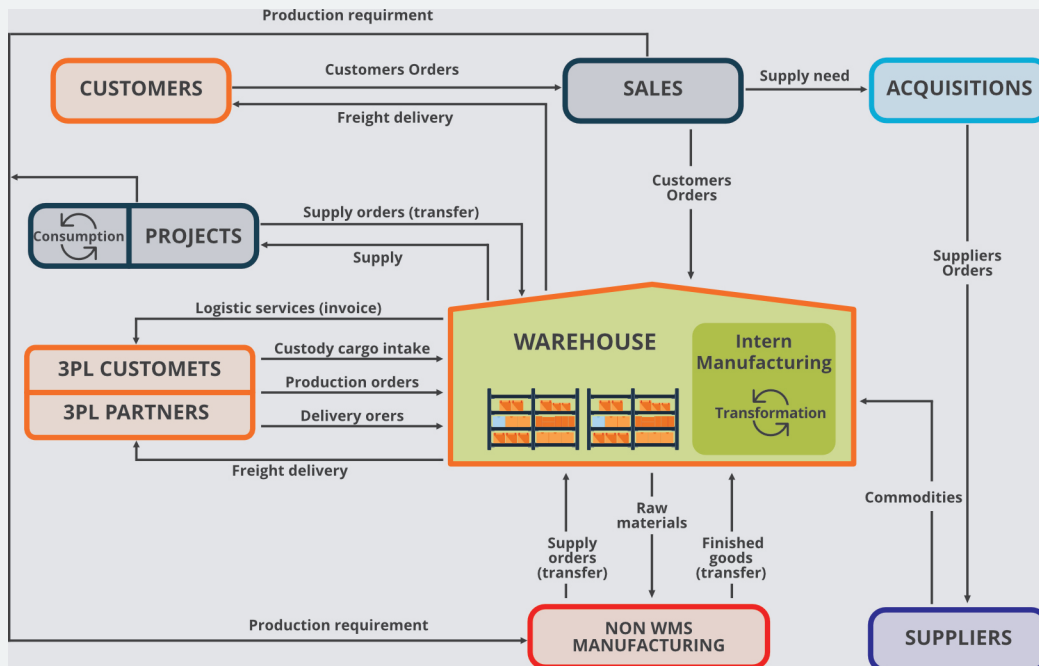

Specific analysis and reports

You always have an overview of important business metrics to improve your business.

3PL

Count logistics services. Through controlled access to the system, it is possible to operate your own documents directly in the system, to check your own stocks, to check the status of delivery orders.

The complete software solution for Logistics
